

ZoomLock™

BRAZE-FREE FITTINGS

There are many exciting advantages to braze-free tube connecting:

- Less equipment and no gas needed
- Safer conditions, no fire hazards
- No hot work permits required
- More environment-friendly
- No solder-related quality issues
- More flexible access to job sites
- No need to nitrogen-purge

New ZoomLock fittings are specially designed to work without brazing, which automatically makes your job simpler and faster when joining copper tubes. In addition, the one-piece fittings are reliably secure, leak-proof and more repeatable than brazed connections—so there's no compromise on quality or performance.

Professionals who have tried ZoomLock braze-free couplings report that their time and labor costs on tube connections are typically reduced 40 – 50% by eliminating the need for brazing. The biggest benefit of that improved efficiency is more productivity and increased profit potential.

Installs up to
77% faster than brazing
in independent testing

- Time savings
- Reduced labor
- Less material
- Less equipment
- No special skills
- No special permits
- Increased safety
- Increased productivity
- Increased flexibility
- More profit potential
